> “27 of 553 agency–complaint–borough combinations = 50% of all excess waiting time”

N Y C

HPD accounts for about 40% of all excess waiting time. NYPD handles the most requests but almost none of the delay.

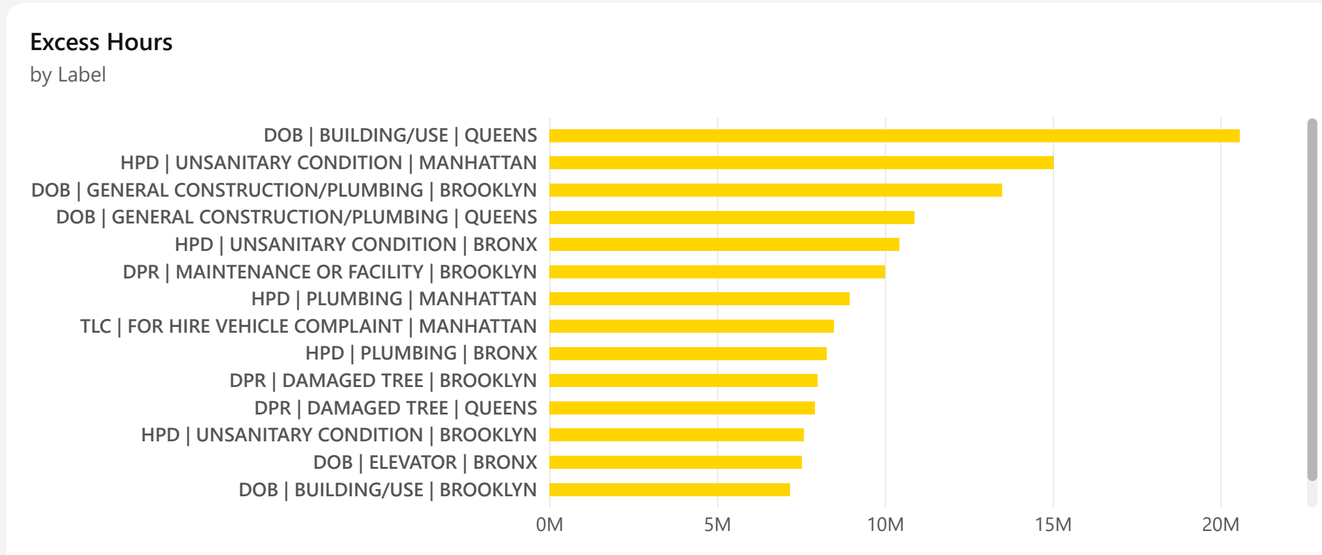

NYC

agency: All

borough: All

Delay clusters in a few places: HPD housing complaints in Manhattan and the Bronx, DOB construction complaints in Queens and Brooklyn, and DPR tree and facility complaints in Brooklyn.

complaint_type	BRONX	BROOKLYN	MANHATTAN	QUEENS	STATEN ISLAND	Total
BUILDING/USE	11.25%	27.17%	3.12%	43.49%	30.06%	**32.03%**

WATER LEAK	31.02%	28.54%	42.29%	32.76%	14.94%	**32.54%**
Total	**30.71%**	**30.65%**	**35.82%**	**36.19%**	**25.61%**	**32.49%**

Excess time = hours beyond the typical time for that complaint type. DPR Maintenance or Facility in Queens is hidden by default because 45% of its requests were closed in one July–August 2026 burst (see Limits).

Recommendation: focus HPD inspection capacity on five combinations first.

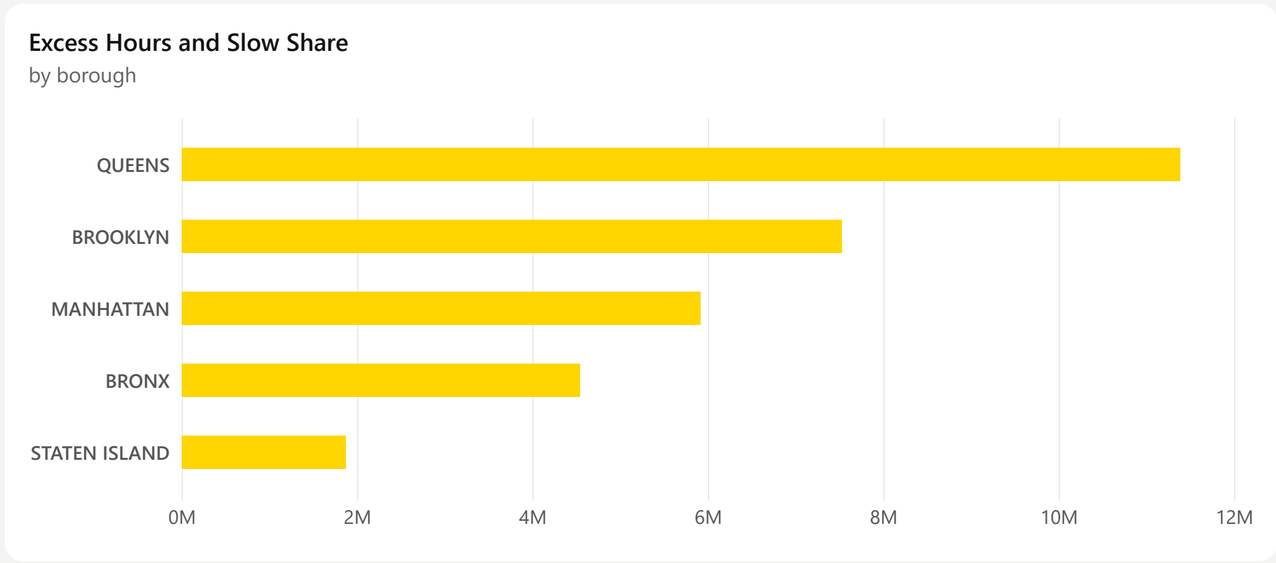

Unsanitary Condition (Manhattan, Bronx, Brooklyn) and Plumbing (Manhattan, Bronx) hold about 29% of HPD's excess waiting time while making up only about 18% of its requests. Eleven of 65 combinations account for half of it.

Manhattan is slowest for both complaint types: 42% of Unsanitary Condition requests and 40% of Plumbing requests are slow, with 90th-percentile waits of about 4 months.

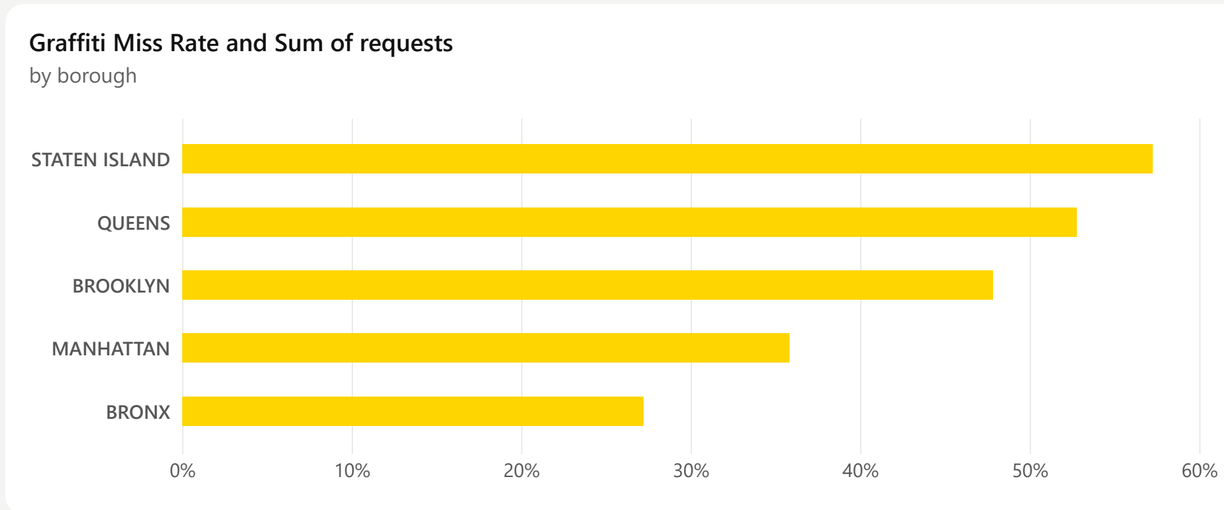

This is a share of delay, not of staff. The data has no staffing numbers, so use it to decide where to look first.

DOB: four combinations (led by Building/Use in Queens and Construction/Plumbing in Brooklyn and Queens) make up about 57% of DOB's excess time. DOB records closing dates without times, so waits are measured in whole days.…

"Street light repairs make up about 45% of DOT's excess waiting time and show up in all four boroughs. This points to a citywide repair-capacity issue, not one under-served borough."

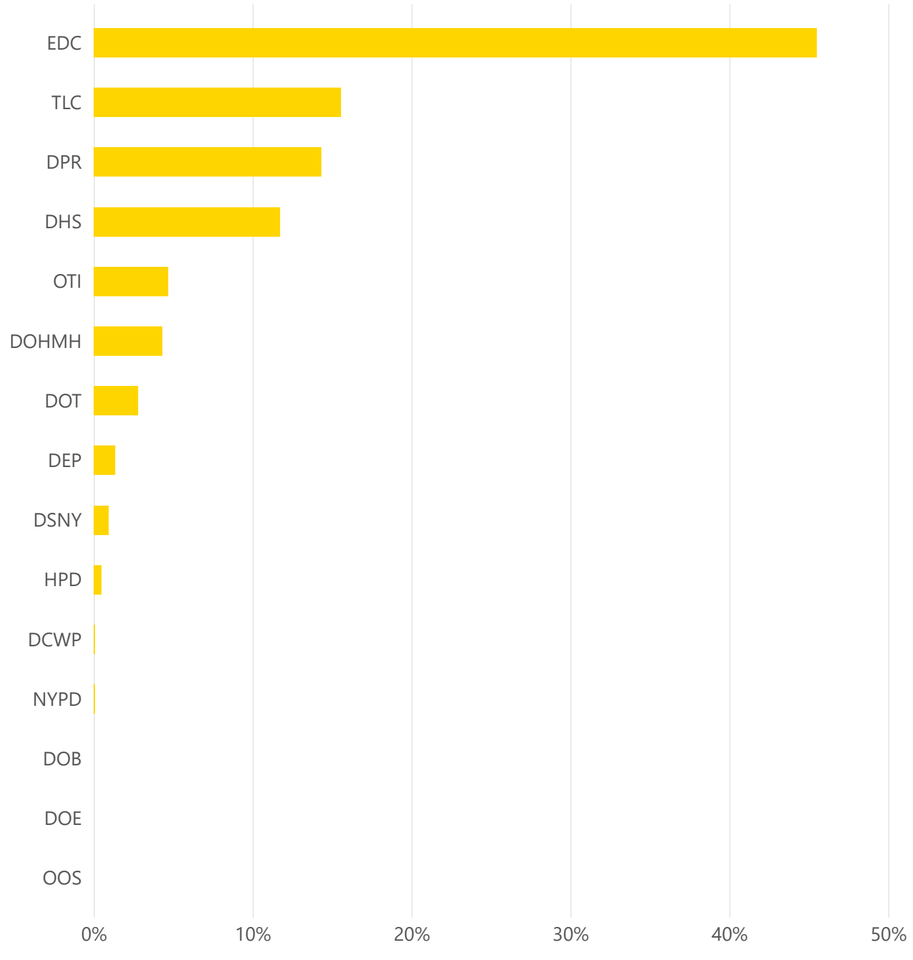

Graffiti is the only complaint with official due dates in this data. 43.5% of 16,260 requests closed after their due date: Queens 53%, Brooklyn 48%, Manhattan 36%, Bronx 27%. Staten Island (57%) has only 372 requests, so read it with care.

How to read this dashboard :

- 1. Excess time is measured against each complaint type's own typical time, not an official target.
- 2. Only graffiti has official due dates (0.45% of requests overall).
- 3. There is no staffing data, so shares are shares of delay, not of staff.
- 4. Many requests are still open for EDC (45.5%), TLC (15.5%) and DPR (14.3%), so their delays are understated.
- 5. DOB records days only. About one in five DOB Building/Use closings in Queens fell in a spring 2026 push.
- 6. 45% of DPR Queens Maintenance requests closed in July–August 2026, which looks like a one-time backlog clearance, so it is shown separately.
- 7. Duplicate requests were removed with my own rule; results are the same with or without them.

Independent analysis of public NYC Open Data. Not affiliated with or endorsed by the City of New York."

Note :

1. I used 44% for NYPD's share of requests in the analyzed data. Earlier I said 47%, which was the share before duplicates were removed. The request-share bar on page 1 will show whichever applies, so match the text to the chart.
2. Every number above comes from your notebook outputs. If you re-run the cleaning with different settings, check these figures against the dashboard before you publish.
